## Product Bulletin #PB00144

**Subject:** A20 Series and Muncie Start® Solenoid Valve Update

Date: July 2, 2026

URL: [www.munciepower.com](http://www.munciepower.com)

---

Effective July 15, 2026, all A20 Series PTOs with the Muncie Start® shift option will use a new solenoid valve and corresponding rear cover, wiring harness, and Muncie Start module.

This new solenoid valve functions in the same manner as the incumbent, but it is not compatible with the old rear cover due to differences in the valve cavity. A new wiring harness is also required due to the new valve having a Deutsch 2-pin connector.

Solenoid valves and rear cover service parts are available for all previously built A20 Series PTOs with Muncie Start. A service kit is also available to convert any A20 Series PTO built before July 15, 2026, to the new solenoid valve and rear cover.

The new part numbers are as follows:  
35T68117 – 12 V Solenoid Valve  
15T68174 – Rear Cover  
19T68187 – M4 x 0.7 Cap Screws  
34T68277 – Muncie Start Harness  
38T68222 – Muncie Start Module for 35T68117

The conversion kit part number is 15TK6913. Please note that the Muncie Start module must be ordered separately.

All support literature will be updated.

Please contact customer service with any questions.
